

Concept :

100 DAYS
OF PYTHON

Day: 1

Filename: day-1-printing-start.py

#Comments

```
01 print()
02 print("Hello World!")
03 print("print('what to print')")
04 print("Hello World!\nHello World!\n")
05 print("Hello" + " " + "Khairi!")
```

when this line is executed, whatever inside the () will be printed to the console

By using double quotes inside the print() function, we are printing out a string

be careful when using single and double quotes inside the print() function in order to avoid syntax error

by using \n the strings will be printed on a new line

+ sign is used to concatenate or combine one or more strings
